

Criterion	Full Points	2' (Excellent)	1' (Acceptable)	0' (Not Evident)
1. Project Choice & Problem Definition	2 points	The problem is clearly defined, and its relevance and practical impact are compelling.	The problem is stated, and its relevance is generally clear, but the practical impact is weak or not explicitly stated.	The problem is vague, lacks focus, or the practicality is not established.
2. Experiment Design & Methodology	2 points	The methodology (data, model, steps) is summarized logically and concisely. The entire process is easy to follow.	The methodology is explained, but some steps or choices lack concise justification or clear summary.	The explanation of the methodology is confusing or makes the overall approach difficult to understand.
3. Results & Evaluation	2 points	Results are clearly presented and explained. The evaluation metrics are justified, and the conclusion is strongly supported by the findings.	Results are presented, but the connection to the evaluation metrics is weak, or the interpretation of the results lacks depth.	Results are missing, unclear, or presented without appropriate context, interpretation, or justification of metrics.
4. Visual Presentation & Clarity	2 points	Visual aids (slides/figures) are professional, clear, and highly effective in supporting the explanation (e.g., well-labeled graphs).	Visual aids are adequate and legible but sometimes contain too much text or are not entirely effective in enhancing the explanation.	Visual aids are poor, cluttered, illegible, or distract from the presentation rather than supporting the content.
5. Delivery & Communication	2 points	The student delivers the presentation with confidence, speaks clearly, and manages time effectively.	The student speaks clearly and covers all required points, but delivery lacks strong confidence, or time management.	The student speaks unclearly, reads heavily from notes, is significantly over/under time.
